Broad application of the best of the known antiknock
agents - tetraethyllead - causes a problem of de-
contamination in the production of the ethyl liquids
by its mixing with fuel and by use of the leaded fuel.
For the decontamination of buildings, equipment and

The pure reflex dogma held in the first quarter of
this century which considered the central nervous
system to be a switchboard with specific centers was
too simple. We have functional circles which influ-

Alterations of the carotid sinus reflexes occur after the injection of pressor agents. These alterations differ, both qualitatively and quantitatively, for adrenalin, tyramine, and renin. The occlusion reflex is markedly (Biological Sciences--Pharmacology, TT, v. 9, no. 11)
